ARDIAL *dial pad*

The Armor Dial pad is a standalone single line analog telephone that can be used with any Armor compatible headset. This is a professional dial pad that was built for the many abuses of a call center. The ARDIAL is unique because it enables the user to control both the headset volume and transmit levels. This product is the proven standard in durability and quality.

AROLIS *and* AROLIT *busy light indicator*

The Armor busy light is the only line plus voice activated indicator anywhere. The brushed satin nickel finished units were designed to compliment today's modern office furniture. Depending on how visible you want the indicator to be or how your office is laid out, you can choose from either the tall 9 inch or shorter 4 inch version. In addition, these sleek on line indicators are equipped with a hook that allows you to hang your headset.

ARYAD *training adapter*

The Armor training adapter is perfect for supervisors or coaches who listen in on their agents' conversations using the same telephone set. It is equipped with dual headset ports and individual microphone mute buttons that can be toggled on or off for either headset. It also allows you to activate both microphones at the same time for a quick and easy conferencing solution.

ARUSB *adapter*

The Armor universal serial bus (USB) adapter is designed specifically for computer telephony use and compatible with all Armor Headsets. It features a proprietary Armor quick disconnect and driver-free installation. Convenient volume and mute controls are integrated, and the coil cord is long enough to assure optimal headset reach.
