TITAN

Quick Disconnection Jack (Optional):
Come and go as you please with our proprietary quick disconnect - without having to remove your headset. Simply pull both ends of the quick disconnect, and reconnect it later.

Unparalleled Sound Fidelity:
Oversized dynamic speakers result in crystal clear sound reproduction. This results in consistently clear telephone conversation.

Safety:
Overbearing audio surges through the headset have been known to happen. Acoustic shock protection for the receiver and surge protection for the microphone are now standard features on Titan headsets.

Proven Durability:
The Titan has been put to the test on various occasions and passed with flying colors. Call centers appreciate the Titan's reliability and durability. It is by far the toughest headset in the Armor lineup.

Easy Handling:
The Titan headsets friendly features allow you to personalize for best fit: adjust your "stay-put" headband, flexible microphone, and pivoting speaker for maximum comfort.

Noise Cancelling (Optional):
High quality electret noise cancelling microphones offer unconditional audio clarity and the elimination of almost all background noise. Titan headsets are a perfect addition to any noisy office or call center environment.
