

## Wireless VoIP – Wideband sound

**The Jabra GN9330 USB Headset is among the first wireless office headsets to offer true wideband audio. VoIP has never sounded this good. Nor has it been this easy to set up and use.**

### Wireless VoIP – Wideband Sound

The Jabra GN9330 USB wireless headset significantly enhances the user's experience with Microsoft® Office Communicator 2007.

The Jabra GN9330 USB wireless headset has an audio bandwidth of 6.8 kHz, which is more than twice that of conventional telephony. Not only does this give users the feeling of a true "face-to-face" conversation, it also helps increase productivity because all details are heard the first time. Noise-canceling microphone technology ensures clear voice transmission, no matter where the user is in the office. And due to digital encryption, conversation security is guaranteed.

### Simplicity with Impact

The Jabra GN9330 USB headset connects quickly and effortlessly to a computer. Intuitive headset controls make it easy to operate, and at less than an ounce, users will forget they are even wearing it. With a range of up to 200 feet, the Jabra GN9330 USB headset makes it possible to take calls throughout an office. And with 6 hours of talk time — and around-the-clock talk time with optional, hot-swappable interchangeable battery — a day's business can be conducted without recharging. The Jabra GN9330 USB headset allows users to escape the limitations of their workstation, providing hands-free convenience, all-day comfort, and superb sound clarity.

### Plug and play

The Jabra GN9330 USB headset works with Microsoft® Office Communicator 2007 without requiring any additional software, including drivers. Just plug the headset into the PC USB port.
