MULTIUSE

WITH BLUETOOTH® BASE AND DONGLE

WIRELESS FREEDOM AND WIDEBAND SOUND

Jabra M5390 Multiuse headset is a Bluetooth headset that connects simultaneously to mobile phones and desk phones - or to mobile phones and PC softphones (via the enclosed PC dongle).

Jabra M5390 Multiuse headset combines the sound and range performance known from office headsets with the convenience of a mobile headset. Based on next generation Bluetooth technology, it offers true wideband audio when used with the A335w dongle and a softphone. The extended wireless range allows users to answer calls up to 70 metres from their desks.

The design and wearing style is optimized for office staff, managers and specialists who spend most of their time in the office – and less on the road. For optimum call clarity in loud office environments, the microphone is placed close to the mouth and features noise cancelling technology. When out of the office, the Jabra M5390 seamlessly connects to the users mobile phone or PC based softphone.

The Jabra M5390 Multiuse base is compatible with most desk phone systems, and the dongle is compliant with a wide range of PC based softphones, Cisco IP Softphone, Skype etc.

TECHNICAL SPECIFICATIONS

What is Multiuse?

Multiuse is a range of Jabra headsets from GN Netcom featuring Multipoint™ technology that allows simultaneous connection to several Bluetooth enabled devices

What is Bluetooth wireless technology?

Bluetooth wireless technology is a radio technology developed to deliver short-range wireless mobility. Bluetooth technology eliminates wires between devices, such as mobile phones and headsets, and enables communication between devices that are in close proximity to one another. Bluetooth facilitates fast, secure transmissions of both voice and data.
