

Polycom® Conference Phones

Benefits of Upgrading to the Newest Generation

WANT TO EXPERIENCE A NEW GENERATION OF VOICE CONFERENCING?

Promotions and incentives are available for upgrading to the newest generation of SoundStations. Ask your Polycom sales representative for more details.

When Polycom launched the original SoundStation in 1992, the way groups communicated over the phone was forever changed. Now 15 years after its introduction, voice conferencing has become mission-critical to businesses of every shape and scope. Whether the call extends across town or across continents, remote collaboration involving multiple speakers requires crystal-clarity to operate effectively. And when you factor in the wide variety of languages and accents included in these calls, the need for pristine call quality becomes more important than ever before.

While Polycom's original models continue to be a staple of conference rooms around the world, they are limited to basic voice conferencing duties. Simply put, it is time to upgrade this voice-conferencing equipment. Over the past 15 years, Polycom has pioneered multiple advancements in voice conferencing technology, incorporating them into a new generation of phones designed for the pace of 21st century business.

These new technologies:

- Create a more realistic experience, with select models using Polycom HD Voice technology to capture both the deeper lows and higher frequencies of the human voice, resulting in conference calls that sound as natural as being there
- Extend the microphones' range, ensuring that everyone in the room is heard loud and clear
- Actively remove background noise emanating from sources such as projectors and ventilation systems
- Highlight the person speaking, using smart microphones that focus on the speaker—not the distracting ambient sounds
- Resist interference from mobile phones and other wireless devices, delivering clear communications with no distractions

Beyond these technical upgrades, Polycom now offers a suite of conference phones specifically designed for different types of rooms and network environments.

- Conference phones designed to meet the acoustic requirements of different types of rooms, such as the SoundStation VTX 1000 for larger conference rooms, and VoiceStation products for small meeting rooms and offices
- Models designed for analog, digital PBX, and VoIP environments, with unique features that take advantage of the benefits provided by the different types of telephony environments
- For the ultimate in flexibility, the SoundStation2W wireless conference phone can be used in multiple offices or conference rooms, or connect it to a mobile phone for conference calls from nearly anywhere

Ask your Polycom representative for a list of current promotions and offers and discover how easy it is to add the clarity and quality of next-generation Polycom conference phones to your organization.
